Caring for the Thynk AV Headset

3 Steps for the Perfect Connection

1

Power & Readiness

Always Stay Charged

🔌 Keep your headset plugged into a power source whenever it isn't in use. This maintains battery health and ensures the device is fully calibrated and ready for your next session.

2

The Skin First Rule

Ensure Direct Contact

🎯 The sensor must sit flush against your skin. Before putting the headset on, sweep all hair back — no hair should be tucked under the sensor or blocking any of the sensor pads

Pro Tip: If your skin is naturally oily, use blotting paper on your forehead before putting the headset on for a cleaner, more stable connection.

3

Troubleshooting the Signal

Boost Your Connectivity

💧 Having trouble making contact? Dab the sensor pad with a small amount of water to lightly moisten it. This creates a *moisture bridge* for a faster, more stable signal read.

About Your Thynk AV Headset

The Thynk AV headset measure real-time attention and cognitive engagement. Proper care and fit ensure accurate data — and a better experience for every student.
